

Department of Computer Science
University of Engineering and Technology, Lahore

Task # 1:

Create a Shopping Cart Application. This application takes the quantity from the user and then calculates the total price of the products.

You can use different controls to make the application user friendly and visually appealing.

A Sample Wire Frame:

Shopping Cart

[< Back to Products](#)

Description	Quantity	Price	Total
Shirt	<input type="text" value="5"/> Remove	\$9.95	\$49.75
Shoes	<input type="text" value="1"/> Remove	\$19.95	\$19.95
Pants	<input type="text" value="2"/> Remove	\$14.95	\$29.90
			Total: \$99.60

It's time to bring your creativity out

Task # 2:

Create Basic Calculator Using Windows Forms And C#. This application is capable of performing addition, subtraction, multiplication as well as division.
