Length and Dot product in Rh

The length, or magnifude, or norm of a vector \vec{V} given by

 $\vec{V} = (V_1, V_2, --- V_n) \text{ in } R^n$

is $\| \vec{V} \| = \sqrt{v_1^2 + v_2^2 + v_3^2} + - + v_n^2$

of VVII=1, the vector is called unit vector.

Example V = (2, -2, 3) in R^3 find length, norm or magnitude?

 $\|\vec{v}\| = \sqrt{2^2 + (-2)^2 + 3^2} = \sqrt{17}$

Unit Vector of is a non zero vector in Rⁿ, then the vector

Vector

III

III

has leight I and has the same direction as V. This vector is called the unit vector in the direction of V.

Example (2) $\vec{\nabla} = (3, -1, 2)$ $\frac{\vec{\nabla}}{|\vec{\nabla} u|} = \frac{(3, -1, 2)}{|\vec{\sigma}|^2 + (-1)^2 + 2^2} = (\frac{3}{514}, \frac{1}{164}, \frac{2}{164})$

Dot product The dot product of $\bar{u} = (u_1, u_2, -u_n)$ and $\bar{v} = (v_1, v_2, -v_n)$ is the scalar quantity $\bar{u} \cdot \bar{v} = u_1 \cdot v_1 + u_2 \cdot v_2 + - - + u_n \cdot v_n$

Example (3) $\vec{u} = (1,2,0,-3)$, $\vec{v} = (3,-2,4,2)$ $\vec{u} \cdot \vec{v} = (1)(3) + (2(-2)) + (0(4)) + (-3)(2) = -7$

Angle Between Two Veetors The angle 0 (0 < 0 < 1)

between two non-Zeno veeters u and v is

 $\frac{\cos 0 = \vec{u} \cdot \vec{v}}{\|\vec{u}\| \|\vec{v}\|} \quad \vec{o} \cdot \vec{J} = |\vec{u}| |\vec{v}| \cos \theta$

Example (y) $\vec{u} = (-4, 0, 2, -2)$ $\vec{v} = (2, 0, -1, 1)$

 $\cos Q = \frac{\vec{u} \cdot \vec{V}}{\|\vec{u}\| \|\vec{V}\|} = \frac{-12}{|\vec{z}| |\vec{v}|} = -1$

Q = X.

or thogonal vectors Two vectors in and V in Ry

are orthogonal of u.v = 0

or thegoral and or thorowal Set

A set S of vectors is called orthogonal of every pair of vectors in S is orthogonal.

In addition, each vector in the set is a unit vector, then S is called or thonormal.

1)
$$\vec{v}_i \cdot \vec{v}_j = 0$$
, $i \neq j$ orthogonal

2)
$$\overline{V_i \cdot V_j} = 0$$
 $i \neq j$ $i = 1, 2, -n$ orthonormal.

Example (5)
$$\vec{v}_1 = (0,1,0)$$
 $\vec{v}_2 = (1,0,1)$, $\vec{v}_3 = (1,0,-1)$

$$\vec{V}_{1}, \vec{V}_{2} = 0 + 0 + 0 = 0$$
 $\vec{V}_{1}, \vec{V}_{3} = 0 + 0 + 0 = 0$
 $\vec{V}_{2}, \vec{V}_{3} = 0 + 0 + 0 = 0$
 $\vec{V}_{1}, \vec{V}_{2}, \vec{V}_{3} = 0 + 0 + 0 = 0$
 $\vec{V}_{1}, \vec{V}_{2}, \vec{V}_{3} = 0 + 0 + 0 = 0$

Example B Show That the set is an orthonormal set

$$S = \left\{ \left(\frac{1}{12}, \frac{1}{12}, 0 \right), \left(\frac{1}{6}, \frac{12}{6}, \frac{2}{5} \right), \left(\frac{2}{3}, \frac{2}{3}, \frac{1}{3} \right) \right\}$$

$$\vec{V}_{L} = \begin{pmatrix} -\sqrt{2} & \sqrt{2} & \sqrt{2} \\ 6 & 6 & 3 \end{pmatrix}$$

$$\vec{V}_{3} = \left(\frac{2}{3}, -\frac{1}{3}, \frac{1}{3}\right)$$

$$\frac{1}{V_1} \cdot V_2 = -\frac{1}{6} + \frac{1}{6} + 0 = 0$$

$$\vec{V}_{1}, \vec{V}_{3} = \frac{2}{3J2} - \frac{2}{3J2} + 0 = 0$$

$$\|\overline{V}_{2}\| = \int \left(-\frac{2}{6}\right)^{2} + \left(\frac{12}{6}\right)^{2} + \left(2\frac{12}{3}\right)^{2} = 1$$

$$\| \overline{V}_3 \| = \int \left(\frac{2}{3} \right)^2 + \left(-\frac{2}{3} \right)^2 + \left(\frac{1}{3} \right)^2$$

heure 4 S= { \(\vert_1\), \(\vert_2\), - \(\vert_1\)} is an orthogonal set of nonzero vectors, that S is linearly in dependent.

Theese of V is an more product space of dimension in, then any orthogonal set of n vectors from a bais for V.

- 1) A basis consisting of orthogonal vectors is called an orthogonal basis
- 2) A basis consisting of orthonormal veeters is called an orthonormal basis.

Example 9 Show that the following set is an orthogonal basis for Ry.

 $S = \{(2,3,2,-2),(1,0,0,1),(-1,0,2,1),(-1,2,-1,1)\}$

V1 = (2,3,2,-2)

V2 = (1,0,0,1)

 $\overline{V}_{3} = (-1, 0, 2, 1)$

Vy = (-1,2,-1,1)

 $\overrightarrow{V}_3 \cdot V_4 = 0$

The set S ferman orthogonal basis for R4.

Example 8 Show that The set

$$S = \{(0,1,0), (\pm 10, \pm 1), (\pm 10, \pm 1)\}$$

form an orthonormal basis for \mathbb{R}^3 .

Theose Every non-zero finite dimensional vector space has an orthonormal basis.

Gram-Schmidt orthonormalization process

1) To convert a basis { \(\vec{v}_1, \vec{v}_2, -- \vec{v}_n \) into an exthegael basis { \vec{w}_1, \vec{w}_2, -- \vec{w}_n \}, perform the following computations.

$$\overline{W}_{1} = \overline{V}_{1}$$

$$\overline{W}_{2} = \overline{V}_{2} - \frac{\overline{V}_{2} \cdot \overline{W}_{1}}{\|\overline{W}_{1}\|^{2}} \overline{W}_{1}$$

$$\overline{W}_{3} = \overline{V}_{3} - \frac{\overline{V}_{3} \cdot \overline{W}_{1}}{\|\overline{W}_{1}\|^{2}} \overline{W}_{1} - \frac{\overline{V}_{3} \cdot \overline{W}_{2}}{\|\overline{W}_{2}\|^{2}} \overline{W}_{2}$$

$$\overline{W}_{n} = \overline{V}_{n} - \frac{\overline{V}_{n} \cdot \overline{W}_{1}}{\|\overline{W}_{1}\|^{2}} \overline{W}_{1} - \frac{\overline{V}_{n} \cdot \overline{W}_{2}}{\|\overline{W}_{2}\|^{2}} \overline{W}_{2} - \frac{\overline{V}_{n} \cdot \overline{W}_{n-1}}{\|\overline{W}_{n-1}\|^{2}} \overline{W}_{n-1}$$

2) To convert
$$\{\vec{w}_1, \vec{w}_2, -\vec{w}_n\}$$
 to orthornel basis
$$\vec{p}_i = \frac{\vec{w}_i}{|\vec{w}_i|} \quad i = 1, 2, ---n.$$

Example (9) Apply Gram - Schmidt Process to the basis

for
$$R^2$$
 { (1,1), (0,1)}

 $\vec{v}_1 = (1,1)$ $\vec{v}_2 = (0,1)$

$$\vec{p}_1 = \frac{\vec{w}_1}{|\vec{w}_1|} = \frac{(1,1)}{|\vec{x}_2|} = (\pm,\pm)$$

$$\vec{p}_{2} = \frac{\vec{\omega}_{2}}{|\vec{\omega}_{2}|} = \left(-\frac{\vec{p}_{2}}{\vec{z}}, \frac{\vec{p}_{2}}{\vec{z}}\right)$$

Example (1,1,0),
$$(1,2,0)$$
, $(0,1,2)$ $\begin{cases} (1,1,0), (1,2,0), (0,1,2) \end{cases}$ $\begin{cases} (1,1,0), (1,2,0), (0,1,2) \end{cases}$ $\begin{cases} (1,1,0), V_{2} = (1,2,0), V_{3} = (0,1,2) \end{cases}$ $\begin{cases} (1,1,0), V_{2} = (1,2,0), V_{3} = (0,1,2) \end{cases}$ $\begin{cases} (1,1,0), V_{2} = (1,2,0), V_{3} = (0,1,2) \end{cases}$ $\begin{cases} (1,1,0), V_{2} = (1,2,0), V_{3} = (0,1,2), V_$
